Summary

Third-year Computer Engineering student seeking a Full Stack Internship focused on React, TypeScript, and data visualization. Experienced in building responsive dashboards, integrating FastAPI and REST APIs with async data handling, and delivering clean, performant UI using React.js, Chart.js, D3.js, and Tailwind CSS. Solved **200+** DSA problems with national-level hackathon recognition.

Education

Government College of Engineering, Jalgaon

B.Tech in Computer Engineering

2024 – 2027

CGPA: 8.05/10

ICRE, Gargoti

Diploma in Computer Engineering

2021 – 2024

80.81%

Technical Skills

Languages: TypeScript, JavaScript, Python, C++, Java, SQL, C

Frontend: React.js, Next.js, TypeScript, HTML5, CSS3, Tailwind CSS, Responsive Design, Chart.js, D3.js

Backend: Node.js, Express.js, FastAPI, Django, REST APIs, Async Data Handling, WebSockets, Socket.IO, JWT

Databases: MongoDB, MySQL, PostgreSQL

Cloud & DevOps: AWS EC2, AWS S3, Docker, Git, GitHub, Postman, Vercel

AI/ML: YOLOv8, OpenCV, Machine Learning, Deep Learning, Computer Vision

Core CS: Data Structures and Algorithms, OOP, DBMS, Operating Systems, Computer Networks, System Design

Experience

Software Developer Intern

NTS Nihon Global

June 2025 – July 2025

Remote

- Built **reusable React.js components** and responsive UI modules with clean architecture, improving maintainability and reducing redundant frontend logic across the application.
- Designed and integrated **RESTful APIs** with JWT authentication, async data handling, and structured error handling for reliable client-server communication.
- Took **end-to-end ownership** of features from problem understanding to delivery in an Agile/Scrum environment, contributing to debugging, optimization, and release stability.

Projects

AI Traffic Management System | React.js, TypeScript, FastAPI, D3.js, Socket.IO, Python, YOLOv8

GitHub

- Built a **real-time monitoring dashboard** in React.js with D3.js data visualizations for live vehicle counts, signal states, and lane-level analytics updated via Socket.IO.
- Integrated frontend with **FastAPI backend** using async REST calls and WebSocket streams, enabling low-latency display of YOLOv8 detection results and emergency preemption events.

Crowdsourced Civic Issue Reporting System | React.js, TypeScript, Node.js, Chart.js, Leaflet.js, JWT, MongoDB

GitHub

- Developed a **responsive React dashboard** with Chart.js visualizations for issue tracking, role-based views for Citizens, Workers, and Admins, and interactive Leaflet.js map integration.
- Implemented **async REST API integration** with JWT-secured endpoints, Cloudinary media uploads, and GPS-based geo-tagging for real-time complaint status workflows.

LinkLoom – Real-Time Communication Platform | React.js, TypeScript, MERN, WebSockets, JWT, React Query, Zustand

GitHub

- Built a **full-stack messaging and video platform** with responsive React UI, event-driven real-time updates, and clean component architecture focused on performance optimization.
- Managed **async data handling** and client-state with React Query and Zustand, ensuring minimal re-renders, low-latency interactions, and scalable frontend architecture.

Achievements & Certifications

- **1st Place** – National-Level 36-Hour Hackathon; **2nd Prize** – National-Level DSA Competition.
- Solved **200+** DSA problems on LeetCode; won **2nd Prize** in C Programming and Project Competition; secured **1st place** in 5+ inter-college coding competitions.
- **NPTEL Elite+Gold** – Programming in Java; **NPTEL Elite** – Machine Learning and Deep Learning; **AWS Academy Cloud Foundations Badge** (2026).
